

Cybersecurity

#### Terms and definitions from Course 6

# Α

Advanced persistent threat (APT): An instance when a threat actor maintains unauthorized access to a system for an extended period of time

Analysis: The investigation and validation of alerts

Anomaly-based analysis: A detection method that identifies abnormal behavior

Array: A data type that stores data in a comma-separated ordered list

## B

Broken chain of custody: Inconsistencies in the collection and logging of evidence in the chain of custody

**Business continuity plan (BCP):** A document that outlines the procedures to sustain business operations during and after a significant disruption

# С

**Chain of custody:** The process of documenting evidence possession and control during an incident lifecycle

**Command and control (C2):** The techniques used by malicious actors to maintain communications with compromised systems

**Command-line interface (CLI):** A text-based user interface that uses commands to interact with the computer

**Common Event Format (CEF):** A log format that uses key-value pairs to structure data and identify fields and their corresponding values

**Computer security incident response teams (CSIRT):** A specialized group of security professionals that are trained in incident management and response

Configuration file: A file used to configure the settings of an application

**Containment:** The act of limiting and preventing additional damage caused by an incident

Crowdsourcing: The practice of gathering information using public collaboration

### D

Data exfiltration: Unauthorized transmission of data from a system

**Data packet:** A basic unit of information that travels from one device to another within a network

Detection: The prompt discovery of security events

Documentation: Any form of recorded content that is used for a specific purpose

#### E

Endpoint: Any device connected on a network

**Endpoint detection and response (EDR):** An application that monitors an endpoint for malicious activity

Eradication: The complete removal of the incident elements from all affected systems

Event: An observable occurrence on a network, system, or device

#### F

False negative: A state where the presence of a threat is not detected

False positive: An alert that incorrectly detects the presence of a threat

Final report: Documentation that provides a comprehensive review of an incident

# Η

**Honeypot:** A system or resource created as a decoy vulnerable to attacks with the purpose of attracting potential intruders

Host-based intrusion detection system (HIDS): An application that monitors the activity of the host on which it's installed

**Incident:** An occurrence that actually or imminently jeopardizes, without lawful authority, the confidentiality, integrity, or availability of information or an information system; or constitutes a violation or imminent threat of violation of law, security policies, security procedures, or acceptable use policies

Incident handler's journal: A form of documentation used in incident response

**Incident response plan:** A document that outlines the procedures to take in each step of incident response

Indicators of attack (IoA): The series of observed events that indicate a real-time incident

**Indicators of compromise (IoC):** Observable evidence that suggests signs of a potential security incident

**Internet Protocol (IP):** A set of standards used for routing and addressing data packets as they travel between devices on a network

Intrusion detection system (IDS): An application that monitors system activity and alerts on possible intrusions

Intrusion prevention system (IPS): An application that monitors system activity for intrusive activity and takes action to stop the activity

# K

**Key-value pair:** A set of data that represents two linked items: a key, and its corresponding value

# L

Lessons learned meeting: A meeting that includes all involved parties after a major incident

Log analysis: The process of examining logs to identify events of interest

Log management: The process of collecting, storing, analyzing, and disposing of log data

Logging: The recording of events occurring on computer systems and networks

## Μ

Media Access Control (MAC) Address: A unique alphanumeric identifier that is assigned to each physical device on a network

### Ν

National Institute of Standards and Technology (NIST) Incident Response Lifecycle: A framework for incident response consisting of four phases: Preparation; Detection and Analysis; Containment, Eradication, and Recovery; and Post-incident activity

**Network-based intrusion detection system (NIDS):** An application that collects and monitors network traffic and network data

Network data: The data that's transmitted between devices on a network

Network Interface Card (NIC): Hardware that connects computers to a network

**Network protocol analyzer (packet sniffer):** A tool designed to capture and analyze data traffic within a network

Network traffic: The amount of data that moves across a network

# 0

Object: A data type that stores data in a comma-separated list of key-value pairs

**Open-source intelligence (OSINT):** The collection and analysis of information from publicly available sources to generate usable intelligence

#### Ρ

**Packet capture (p-cap):** A file containing data packets intercepted from an interface or network

**Packet sniffing:** The practice of capturing and inspecting data packets across a network

Playbook: A manual that provides details about any operational action

**Post-incident activity:** The process of reviewing an incident to identify areas for improvement during incident handling

## R

**Recovery:** The process of returning affected systems back to normal operations

**Resilience**: The ability to prepare for, respond to, and recover from disruptions

Root user (or superuser): A user with elevated privileges to modify the system

### S

Search Processing Language (SPL): Splunk's query language

Security information and event management (SIEM): An application that collects and analyzes log data to monitor critical activities in an organization

Security operations center (SOC): An organizational unit dedicated to monitoring networks, systems, and devices for security threats or attacks

Security orchestration, automation, and response (SOAR): A collection of applications, tools, and workflows that uses automation to respond to security events

Signature: A pattern that is associated with malicious activity

Signature analysis: A detection method used to find events interest

Standards: References that inform how to set policies

**Sudo:** A command that temporarily grants elevated permissions to specific users **Suricata**: An open-source intrusion detection system and intrusion prevention system

#### tcpdump: A command-line network protocol analyzer

Telemetry: The collection and transmission of data for analysis

Threat hunting: The proactive search for threats on a network

**Threat intelligence:** Evidence-based threat information that provides context about existing or emerging threats

Triage: The prioritizing of incidents according to their level of importance or urgency

True negative: A state where there is no detection of malicious activity

True positive An alert that correctly detects the presence of an attack

# V

Т

VirusTotal: A service that allows anyone to analyze suspicious files, domains, URLs, and IP addresses for malicious content

### W

Wildcard: A special character that can be substituted with any other character

Wireshark: An open-source network protocol analyzer

### Y

YARA-L: A computer language used to create rules for searching through ingested log data

Zero-day: An exploit that was previously unknown
